Abstract
This study aims to examine empirically the effect of firm size, asset growth, leverage and profitability of the company's value. A phenomenon that occurs in this study, that the presence of the data value of the company that are not consistent from 2009 to 2013 that adversely affect the company's future sustainability will come, especially at companies that have gone public. In this study, the population in the study are Manufacturing company listed on the Indonesia Stock Exchange (IDX) Year 2011-2014. Samples were selected using purposive sampling method. The data used is secondary in the capture of the annual report. Hypothesis testing is done by multiple linear regression tests. Based on the hypothesis testing results show that the size of the company, asset growth, leverage and profitability together significantly affect the value of the Company. But viewed as a partial result of hypothesis testing firm size, asset growth, and leverage proven to demonstrate a significant influence profitability while no significant effect on the value of the company.

Keywords : The effect size of the company, asset growth, leverage and profitability of the value of the Company
